

FINAL PROJECT INTERNAL MARKS 2015-16

Final internal marks of Project, finalized based on considering the average of phase 1 and phase 2 marks along with guide and project committee decision.

SI No	NAME	USN	Project Name	GUIDE NAME	Final IA – Marks (Max.: 100)	Guide Signature
-	Mr. Prabhat Kumar	1HK12ME060		SATISHA	100	Salv
2	Mr. Ravi Kumar Sharma	1HK12ME064	DESIGN AND		99	- 40
3	Mr. Ravi Vishwakarma	1HK12ME065	ANALYSIS OF		100	c.
4	Mr. ShrivastavaAdarshkum J	1HK12ME076	HEAT PIPES		98	SHI
5	Mr. Saif .B	1HK12ME068	Automated	Kishan kumar	93	Kill-
6	Mr. NiyasShowkath Ali	1HK11ME067	Waste Segregation		93	a.
7	Mr. Mohammed Shahid	1HK13ME412	System Using		92	E.
8	Mr. Mohammed Shouib	1HK08ME97	smart Bin		90	Vs.
9	Ms. Roshani. R. Kalburgi	1HK13ME417	FRICTIONLES	Saleem Shareef	95	82

## Circular

Date: 18/02/2019

All the 8th semester students are informed to adhere to the following schedule with respect to Project work phase-2 (15CPSP85).

S.#	Date	Time	Sem/ Section	Events		
1.	12-03-2019	1:40:4:10	VII A	Review-2 (Demo- More than 80%		
2.	14-03-2019	1:40:4:10	VII B	of the project should be completed)		
3.	3-04-2019		VII A and B	Submission of Project Report draft( chapter 5,6,7,8)		
4.	16-04- 2019	1:40:4:10	VII A	Final Review (Demo of comple		
5.	18-04- 2019	1:40:4:10	VII B	working project)		
6.	25-04-2019		VII A and B	Submission of paper for publication with plagiarism report		
7.	30-04-2019	-04-2019 - VII		- VII A and B		Final Report submission(Hard Binded 1copy(Department+1 copy(Library) +1 (Each student)

#### Note:

Evaluation scheme (out of 100 Marks)

- a. 40 Marks by respective Guide
- b. 30 Marks by Project committee
- c. 15 Marks for paper publication
- d. 15 Marks for Project Report

Project Coordinators:

B Section: Prof. Tabassum Ara

#### TO WHOMEVER IT MAY CONCERN

This is to certify that Kaisar Anwar Wani bearing registration number 1HK17MBA07, a student of 2nd year MBA from HKBK College of Engineering Bangalore, has successfully completed his project work (A study on Work Life Balance), in our organization for a period of six weeks from 03/01/2019 to 16/02/2019 as a partial fullfillment as prescribed by the university.

During these days, he was found to be sincere and hard working.

We wish him all the success in the future.

S. No. 22/1, NAGAWARA, BENGALURU - 560045

Automatic StreetLight Control System is a simple yet powerful concept, which uses transistor as a switch. By using this system manual works are 100% removed. It automatically switches ON lights when the sunlight goes below the visible region of our eyes. This is done by a sensor called Light Dependent Resistor (LDR) which senses the light actually like our eyes. It automatically switches OFF lights whenever the sunlight comes, visible to our eyes. In this system we are producing the power from the wind energy by using wind-mill which is connected to a generator to produce electrical energy. By using this system energy consumption is also reduced because nowadays the manually operated street lights are not switched off even the sunlight comes and also switched on earlier before sunset. In this project, no need of manual operation like ON time and OFF time setting. This project clearly demonstrates the working of transistor in saturation region and cut-off region.

#### H.K.B.K. COLLEGE OF ENGINEERING

S. No. 22/1, NAGAWARA, BENGALURU - 560045

Smart automatic street light is designed using Timer IC 555 and LDR. When darkness rises to a certain level then sensor circuit gets activated and switches ON and when there is other source of light i.e. daytime, the street light gets OFF. The sensitiveness of the street light can also be adjusted. In our work, we have used eight LED as a symbol of street lamp, but for high power switching one can connect Relay (electromagnetic switch) at the output of pin 3 of IC 555 that will make easy to turn ON/OFF any electrical appliances that are connected through relay. IC 555 timer is a one of the most widely used IC in electronics and is used in various electronic circuits. The timer got its name from the three 5 kilo-ohm resistor in series employed in the internal circuit of the IC. The 555 timer comes as 8 pin DIP (Dual In-line Package) device. There is also a 556 dual version of 555 timer which consists of two complete 555 timers in 14 DIP and a 558 quadruple timer which is consisting of four 555 timer in one IC and is available as a 16 pin DIP in the market.

Prof. Reshma Sultana

CNC means Computer Numerical Control. This means a computer converts the design produced by Computer Aided Design software (CAD), into numbers. The numbers can be considered to be the coordinates of a graph and they control the movement of the cutter or in this case the pen.

The plotter is a computer printer for printing vector graphics. In the past, plotters were used in applications such as computer-aided design, though they have generally been replaced with wide-format conventional printers. A potter gives a hard copy of the output.

Motion controlled along multiple axis, at least two (X and Y)and a tool spindle that moves in a Z axis (depth). The position of the tool is driven by the direct driven stepper motor or servo motor in order to provide highly accurate movements ,or in older design motors through a series of step down gears. Open loop control works as long as the forces are kept small enough and speeds are not too great. On commercial metal working machines ,close loop controls are standard and required in order to provide accuracy ,speed and repeatability demanded.

. The prototype is shown in the figure.

This mobile phone detector can sense the presence of an activated mobile phone from a distance of four to five meter's. So it can come handy in an examination hall or meetings where mobile phones are not permitted.

The circuit can detect incoming calls and outgoing calls, SMS's, internet and video transmission even if a mobile phone is kept in silent mode. When it detect an RF signal from an activated mobile phone, its LED starts blinking and continues to blink until the signal stops.

This handy, pocket-size mobile transmission detector or sniffer can sense the presence of an activated mobile cell phone from a distance of one and-a-half meters. So it can be used to prevent use of mobile phones in examination halls, confidential rooms, etc. It is also useful for detecting the use of mobile phone for Spying and unauthorized video transmission.

The circuit can detect the incoming and outgoing calls, SMS and video transmission even if the mobile phone is kept in the silent mode. The moment the Bug detects RF transmission signal from an activated mobile phone, it starts sounding a beep alarm and the LED blinks.

The alarm continues until the signal transmission ceases.

This RADAR can sense the presence of any object from a distance of 35 to 40cms. So it can come handy in Aircraft anti-collision systems, ocean surveillance systems and for other security systems.

RADAR an acronym for Radio Detection And Ranging. It is an object detection system which uses radio waves to determine the range, altitude, direction, or speed of objects.

RADAR systems come in a variety of sizes and have different performance specifications. Some radar systems are used for air-traffic control at airports and others are used for long range surveillance and early-warning systems. A radar system is the heart of a missile guidance system. Small portable radar systems that can be maintained and operated by one person are available as well as systems that occupy several large rooms.

The circuit can detect any object which is kept in front of the sensor. The sensor sends echos which are reflected by the object and the time taken by the echo to return determines the distance of the object from the sensor. As soon as any object is detected the Buzzer starts to sound until the object is removed.

# ELECTRICAL AND ELECTRONICS ENGINEERING

For the academic year 2018 - 2019

By

ZAKARYA KHALED SAEED HAMMAD ABDULAZIZ MEASAR ALI ALNEHMI -1HK16EE029

Under the guidance of
Prof. RESHMA SULTANA
Assistant Professor, Dept. of EEE, HKBKCE, Bengaluru

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

H.K.B.K. COLLEGE OF ENGINEERING

S. No. 22/1, NAGAWARA, BENGALURU - 560045

Voltmeter is the basic tool of engineering measurements. It is used to measure the potential difference between two points or across devices. Carrying of voltmeter and voltmeter probes sometimes becomes very hard to hold both at the same time. Here we are designing a voltmeter with wireless display such that the display will be attached to optical glass, so that the hands are able to hold both probes more carefully and effectively.

This is done by using two Arduino boards, one for getting the input voltage to be measured and the other to display the voltage on the Oled display. The reason of selecting Arduino as controller is basically because it is in very small size and it has built-in analog to digital converter which we will be using for this project. The transmission between the arduino is done by using NRF24L01 module.

#### Abstract:

Automatic Street Light Control System is a simple yet powerful concept, which uses transistor as a switch. By using this system manual works are 100% removed. It automatically switches ON lights when the sunlight goes below the visible region of our eyes. This is done by a sensor called Light Dependant Resistor (LDR) which senses the light actually like our eyes. It automatically switches OFF lights whenever the sunlight comes, visible to our eyes. In this system we are producing the power from the wind energy by using wind-mill which is connected to a generator to produce electrical energy. By using this system energy consumption is also reduced because nowadays the manually operated street lights are not switched off even the sunlight comes and also switched on earlier before sunset. In this project, no need of manual operation like ON time and OFF time setting. This project clearly demonstrates the working of transistor in saturation region and cut-off region. The working of relay is also known.

#### ABSTRACT:-

The tesla coil is an air coiled transformer which gives high frequency current and voltage output. Many alterations done to the original design to increase the efficiency and the usage of the device. This paper deals with one such alterations which is replacing the AC supply with a DC supply and study the output of the device. With the change in the supply the circuit components were changed as well. A DC supply is given to a solid state miniature tesla coil with a slayer exciter. A series of simulations and practical tests are run to study about the nature of the output that is being received. Various applications and uses are also suggested theoretically and which are under development. This paper opens up a wide scope for future study in the area of wireless power transmission and high voltage electronics.

In this fast paced life of 21st century, automation plays a key role in human life. Home automation allows us to control household electrical appliances like light, door, fan, AC etc. It also provides home security and emergency system to be activated. Home automation not only refers to reduce human efforts but also energy efficiency and time saving.

The main objective of home automation and security is to help handicapped and old aged people who will enable them to control home appliances and alert them in critical situations. This project put forwards the implementation of home automation and security system using Microcontroller and Android smartphone. Home appliances are connected to the microprocessor and communication is established between the Microcontroller and Android mobile device or tablet via Bhietooth module.

We would develop an authentication to the system for authorized person to access home appliances. The device with low cost and scalable to less modification to the core is much important. It presents the design and implementation of automation system that can monitor and control home appliances via android phone or tablet.

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

H.K.B.K. COLLEGE OF ENGINEERING

S. No. 22/1, NAGAWARA, BENGALURU - 560045

This RADAR can sense the presence of any object from a distance of 35 to 40cms. So it can come handy in Aircraft anti-collision systems, ocean surveillance systems and for other security systems.

RADAR an acronym for Radio Detection and Ranging. It is an object detection system which uses radio waves to determine the range, altitude, direction, or speed of objects.

RADAR systems come in a variety of sizes and have different performance specifications. Some radar systems are used for air-traffic control at airports and others are used for long range surveillance and early-warning systems. A radar system is the heart of a missile guidance system. Small portable radar systems that can be maintained and operated by one person are available as well as systems that occupy several large rooms.

The circuit can detect any object which is kept in front of the sensor. The sensor sends echoes which are reflected by the object and the time taken by the echo to return determines the distance of the object from the sensor. As soon as any object is detected the Buzzer starts to sound until the object is removed.

Using three wheeled drive robot, flame sensors and Arduino UNO, an autonomous was designed to detect fires, extinguish and avoid obstacles. The scope of the project in the industrial sector is vast, especially in the fire department.

The main operation of the robot is to detect and extinguish the fire source with the input from the flame sensors and extinguishing flames with water.

It has a field of view of 1800 to detect flames with obstacle avoidance to maneuver in the surroundings. This is achieved by integrating three flame sensors capable of detecting flames into the robot 60° apart in order to achieve an 180° field of view. Since each flame sensor has a field of view of 60°.

By using three sensors, a general direction of flame can be computed by the data read from each sensor. In order to extinguish the flame, and attaching a servo motor to the tank to discharge the water. TN : 32101038505
